Qualcomm Austria - Currently Recruiting Test Engineering Interns for 2011

Qualcomm is taking its traditional strengths in digital wireless technologies in exciting new fields such as Augmented Reality and Computer Vision. The Corporate R&D Systems Test and Integration team builds and tests prototype systems for new technologies. Team members will interact closely with systems engineers and software developers in our Corporate R&D Vienna team. The scope includes concept reviews, system implementation, tuning, testing and demos. Candidates should be flexible in their work assignments as priorities can change quickly in this fast paced environment.

Candidates should have outstanding C++ and/or Java programming skills, expertise in object-oriented design, and a good foundation in ONE of the following areas: 1. Augmented Reality & Computer Vision, 2. Integration & Verification, 3. Software Tools. Android and/or mobile development experience is a plus, understanding of image processing and computer graphics. Should have great interest in new technologies and be willing to learn.

To qualify for this position you should be student studying either a BS or MS in Electrical or Computer Engineering (preferred) or Computer Science. You should be in the middle or towards the end of your studies looking for an Intern placement as a mandatory/preferred part of your degree. The placement is for 4 mths with flexible start dates based in our Vienna location in Austria.
